SUMMARY

Full stack engineer with 4+ years building and running production software for Iberdrola, one of Europe's largest utilities. I currently help move core logic into new microservice-based applications, and I have owned large migrations and critical security fixes end to end. On my own time I built an AI order-processing product in Spring Boot, and I use AI coding tools daily while keeping a high bar for correctness and security.

EXPERIENCE

Full Stack Developer — Ayesa Ibermatica (Iberdrola account) Jun 2022 – Present

Public EV charging project · 2026 – present

- Develop the middleware layer and migrate part of the core platform into two new microservice-based applications.

Iberdrola Spain website and mobile app · 2022 – 2026 · team of 50+ engineers

- Migrated and maintained the front end of the Iberdrola Spain website (Angular) and the middleware behind the Spain website and app (Java / Spring Boot).
- Resolved critical security vulnerabilities in key parts of the platform.
- Carried out large-scale migrations on my own with no production incidents, including moving the app middleware from Swagger 2 to OpenAPI 3.
- Proposed and built the energy consumption screen of the residential customer website, improving load performance and user experience.
- Wrote unit tests with JUnit 5 (backend) and Jasmine (frontend).

Founder & Engineer — Axonflow (side project) 2026 – Present

- Built an AI order-intake system: a Java 21 / Spring Boot service that reads purchase orders from PDF, Excel and email, extracts them with an LLM and prepares them for an ERP (Odoo).
- Put the LLM behind a swappable interface, with JSON schema validation and automatic retries on invalid output.
- Built an evaluation harness against a 20-order test set with expected results: 100% of fields correct (500/500) on 18 text-based orders, ~7 s per order.
- Designed an Angular review inbox where a person only handles exceptions, and shipped the company website axonflow.es in Next.js.

SKILLS

Backend	Java, Spring Boot, REST APIs, microservices, OpenAPI, PostgreSQL, Flyway
Frontend	Angular, TypeScript, Next.js / React
Quality	JUnit 5, Jasmine, security fixes, large-scale migrations
AI	LLM integration (structured output, validation, evaluation); daily use of AI coding tools
Tools	Git, Maven, Docker

EDUCATION

Higher Vocational Degree in Multiplatform Application Development (DAM) — CIFP Elorrieta-Errekamari, Bilbao

LANGUAGES

Spanish (fluent) · Romanian (native) · English (B1, actively improving)
